Schedule (Time) : _____
Amount to pay : \$ _____

SCOPES OF WORK:

- * A program designed to control most common crawling insects such as Roaches, Ants, Crickets, Spiders, and Silverfish. (Bed Bugs, Fleas and Ticks are not included and need special service plan.)
- * Prior to beginning service, the Truly Nolen technician will report directly to client authorized personnel. Information gathered regarding insect activity noted will be used in analyzing and determining treatment action plan. This information along with a physical inspection will provide the technician with the knowledge needed to perform the appropriate service.
- * A Pest Site Log will be provided and kept on location with client authorized personnel. The site log will allow for documenting reports of pest sightings. The technician will review the site log on each service visit and make note of any corrective actions taken to address the issue.
- * The Truly Nolen Three Zone Protection Plan uses integrated pest management strategies along with five step process known as the Five Steps of Truly Care to provide exceptional service. This five steps process includes Inspection, Identification, Determination, Control, and Communication.
- * All products are applied by trained Truly Nolen technicians in a manner to prevent contact by people or pets.
- * As part of any Truly Nolen service an inspection is performed and any potential problems such as harborage areas, conducive conditions, and sanitation issues are noted on the service report and recommendations are made to the client to correct.

REGULAR MAINTENANCE SERVICE

- * Regular maintenance service is required to control unwanted pest activity. The protocol for treatment is identical to the initial service protocol outlined above.
- * The goal of Truly Nolen is to offer our clients the highest level of control while remaining environmentally responsible. We are proud of our reputation and commitment to safety and welfare of our clients, their property and the environment. All material applications will be targeted and limited to using only amounts needed to meet control requirements.
- * Frequency of service can vary depending on the facility and specific areas in each facility. Service frequency is customized to meet the control requirements and budget requirements of our clients
